

Amendments to the Claims:

This claims below will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (currently amended) A method for selectively printing a desired portion of a web page, comprising the steps of:
passing a named tag element for the desired portion into the desired tag element portion of the web page, wherein the named tag element is identified with an identification attribute predefined with a unique name for each desired portion of the web page;

querying the unique name of the named tag element for an inner Hyper-Text Markup Language block for the desired portion;
opening a browser window;
creating a stream of text for the desired portion and sending the stream of text to the browser; and
activating printing, by the browser, of the stream of text.

2. (original) The method of claim 1 further including, after printing is completed by the browser, the step of closing the browser.

3. (original) The method of claim 1 wherein sending the stream of text to the browser includes using a scripting language to send the stream of text to a separate browser window for printing.

4. (currently amended) The method of claim 1 wherein the scripting language is Javascript® is client-side based.

5. (currently amended) The method of claim 1 wherein creating a stream of text for the desired portion and sending the stream of text to the browser is accomplished without downloading before the browser downloads additional content to a user's computer.

6. (currently amended) The method of claim 1 wherein creating a stream of text for the desired portion and sending the stream of text to the browser is accomplished without installing before the browser installs plug-in routines.

7. (currently amended) The method of claim 1 wherein creating a stream of text for the desired portion and sending the stream of text to the browser is accomplished without installing before the browser installs executable programs.

8. (currently amended) The method of claim 1 wherein creating a stream of text for the desired portion and sending the stream of text to the browser is accomplished without installing ActiveX controls before the browser installs a program control.

9. (withdrawn) A method for selectively printing a desired portion of a web page, comprising the steps of:

- navigating to the web page; and
- activating a mechanism that invokes a scripting function associated with the desired portion of the web page wherein the mechanism:
 - defines an image tag with an event attribute for calling a function for printing the desired portion and the function includes a named tag element and source attribute defining a Hyper-Text Markup Language block for the desired portion; and
 - identifies the named tag element with an identification attribute associated with the desired portion; and
 - printing, by the browser, the desired portion of the web page.

10. (withdrawn) The method of claim 9 further including, after printing is completed by the browser, the step of closing the browser.

11. (withdrawn) The method of claim 9 further including, immediately before printing, by the browser, the desired portion, the step of using a scripting language to send the stream of text to a separate browser window for printing.

12. (withdrawn) The method of claim 11 wherein the scripting language is Javascript®.

13. (withdrawn) The method of claim 9 wherein printing, by the browser, the desired portion is accomplished without downloading additional content to a user's computer.

14. (withdrawn) The method of claim 9 wherein printing, by the browser, the desired portion is accomplished without installing plug-in routines.

15. (withdrawn) The method of claim 9 wherein printing, by the browser, the desired portion creating a stream of text for the desired portion and sending the stream of text to the browser is accomplished without installing executable programs.

16. (withdrawn) The method of claim 9 wherein printing, by the browser, the desired portion is accomplished without installing ActiveX® controls.

17. (currently amended) A system for selectively printing a desired portion of a web page, comprising:

- a PrintNow mechanism for invoking a scripting function, arranged to, when activated, call up a print function for the desired portion of the web page;

- a named tag unit of the print function that is arranged to surround HTML that defines the desired portion of the web page and that is coupled to the PrintNow mechanism, for passing a tagged element for the desired portion into another web page, wherein the named tag element is identified with an identification attribute predefined with a unique name for each desired portion of the web page;

- a query unit, coupled to the named tag unit, for querying the unique name tagged element for an inner Hyper-Text Markup Language block for the desired portion; and

- a browser application software unit, containing the query unit and

arranged to provide control of a browser, for opening a browser window, and for when a streaming unit that is coupled to the browser application software unit creates a stream of text for the desired portion and sends the stream of text to the browser, without installing or activating printing of the stream of text.

18. (original) The system of claim 17 wherein when printing is completed by the browser, the browser application software unit closes the browser, browser application software unit.

19. (original) The system of claim 17 wherein the streaming unit utilizes a scripting language to send the stream of text to a separate browser window for printing.

20. (currently amended) The system of claim 19 wherein the scripting language is JavaScript® is client-side based.

21. (currently amended) The system of claim 17 wherein the streaming unit creates the stream of text for the desired portion and sends the stream of text to the browser without downloading before the browser downloads additional content to a user's computer.

22. (currently amended) The system of claim 17 wherein the streaming unit creates the stream of text for the desired portion and sends the stream of text to the browser is without installing before the browser installs plug-in routines.

23. (currently amended) The system of claim 17 wherein the streaming unit creates the stream of text for the desired portion and sends the stream of text to the browser without installing before the browser installs executable programs.

24. (currently amended) The system of claim 17 wherein the streaming unit creates the stream of text for the desired portion and sends the stream of text to the browser without installing ActiveX® controls before the browser installs a program control.

25. (withdrawn) A system for selectively printing a desired portion of a web page comprising:

- a navigating unit, coupled to receive a request from a user to navigate to the web page, for navigating to the web page; and
- a portion-select printer mechanism that can invoke a scripting function, wherein the mechanism is associated with the desired portion of the web page, coupled to the navigating unit and the web page, to receive an activation signal when selected by the user, wherein the mechanism defines an image tag with an event attribute for calling a function for printing the desired portion and the function includes a name tag element and a source attribute defining a Hyper-Text Markup Language block for the desired portion; and
- identifies the name tag element with an identification attribute associated with the selected portion; and upon receiving the activation signal, activates printing, by the browser, of the desired portion of the web page.

26. (withdrawn) The system of claim 25 wherein the portion-select printer mechanism associated with the desired portion of the web page, after printing of the desired portion is completed by the browser, closes the browser.

27. (withdrawn) The system of claim 25 wherein the portion-select printer mechanism associated with the desired portion of the web page activates a streaming unit that uses a scripting language to send the stream of text to a separate browser window for printing.

28. (withdrawn) The system of claim 27 wherein the scripting language is Javascript®.

29. (withdrawn) The system of claim 27 wherein the streaming unit creates the stream of text for the desired portion and sends the stream of text to the browser without downloading additional content to a user's computer.

Serial No.: 090625
Attorney Docket No.: 100904-1

30 (withdrawn) The system of claim 27 wherein the streaming unit creates a stream of text for the desired portion and sends the stream of text to the browser without installing plug-in routines.

31 (withdrawn) The system of claim 27 wherein the streaming unit creates a stream of text for the desired portion and sends the stream of text to the browser without installing executable programs.

32 (withdrawn) The system of claim 27 wherein the streaming unit creates a stream of text for the desired portion and sends the stream of text to the browser without installing ActiveX® controls.
